

Succesful Social In St. Ambrose Hall

St. Ambrose parish hall was taxed to capacity for the social evening held there last evening under the auspices of the W. A. The prize offered for the whist drive were of such a nature that the competition was keener than ever before, and so close were the scores that the auditors had some difficulty in making the awards.

Fred Gann was finally declared the winner of the special prize, which was a first big turkey for making the highest score of the evening.

Mrs. McKinley won the ladies' first prize and Geo. Abbott the gent's. This prize was a duck. Also, the second prizes went to Ivy Bardell and a Du Beau and Miss Pinder and H. Champlin. The third prize was a chicken for each winner.

At the whist there was a musical program and refreshments. Danahy brought this most successful evening to a close.

Should be Careful About Crossing River

A severe narrow escapes from drowning experienced by men trying to cross the river south of town to go to work at the coal mine on the

A warning to the men to exercise the greatest precaution in their attempt to cross the stream.

times get into the water, especially those with families, to try and get in every working day of the week, but in taking these risks there's something else to be considered. Supporting the risk should prove to be a benefit. If you are strong enough to provide comforts would be worth it than if you had missed a day's pay. If you are strong enough to be generous and most treacherous one should always be treated as such. There have been several drowning accidents at the already this season.

Dr. McDonald has been in Medicine Hat for several years and well known in this town, where he has been called.

Advise Precautions Against Scarlet Fever

Scarlet fever is a treacherous disease. When not properly taken care of, it often affects the kidneys.

Beel Found in
Alderson Restaurant

Investigating complaints that M. Nelly Sharp of Alderson, was selling beer, liquor enforcement officer Brown and Corporal Frewin of the local

restaurant at Alderson operated by M. Shap last week. They searched the premises and found half a barrel of beer.

As a result she was summoned to appear at the A. P. P. court in Macine Hat. She appeared before Magistrate Ellis, pleaded guilty to selling beer without a license and was fined \$100 and costs. This being her first offence Magistrate Ellis imposed the minimum penalty.

**RECORD SHIPMENT OF EGGS
ON LEAVE MONTREAL VESSEL**

What is believed to be the largest shipment of eggs ever to leave Montreal on a single vessel, was recently carried on the Melita, which sailed for Belfast and Glasgow with a cargo of Canadian produce, including 3,132,000 eggs, or 8, 702 cases.

Plan Elaborate Research Work For The Eradication of Rust In Wheat Fields Of Canada

Research work for the eradication of rust in Canada's wheat fields may have its headquarters in Winnipeg if the plan under consideration by the Federal and Manitoba Agriculture Departments mature as expected, and the laboratories will be located on the grounds of Manitoba Agricultural College, says the Manitoba Free Press. Hon. W. M. McEwen, Federal Minister, and Pres. J. A. MacLean and Dean McMillan, of Manitoba Agricultural College, have conferred on a proposal to erect a 140,000 building with sufficient land for experimental purposes, about 25 acres. The land is offered free to the Federal Department by the Provincial College.

Rust has caused an annual toll on crops for 2,000 years, official state, and it is not expected that its eradication will be accomplished immediately. A feature of the campaign is that it is being funded on a government basis. The Federal Government is not expecting that any direct results will be obtained for years and years. No effort will be spared, however, and gradually, perhaps, a solution will be evolved.

Butter Production Increasing

Expect Saskatchewan Output Will Reach 55,000,000 Pounds This Year

Dairying in Saskatchewan is progressing in a remarkable manner. Production of creamery butter in the province during September reached the high figure of 1,454,331 pounds, as compared with a total of 977,633 pounds in the same month last year. This increase of more than 50 per cent in a full month is the biggest gain in butter production in the province in any one month.

Officials of the Provincial Dairy Branch anticipate the total creamery butter production for 1924 will reach the peak of 13,000,000 pounds, a gain of 3,000,000 pounds over the 1923 high record. Total production of creamery butter in Saskatchewan up to the end of October was 12,400,000 pounds against 9,000,000 pounds for the first nine months of 1923.

Movement to the Cities

Ontario School Census Reveals Shifting of Population

Twenty years has seen a marvelous change in the school population of Ontario. Figures published by Premier Ferguson show that six out of ten of the school children in Ontario are city or town dwellers. Twenty years ago six out of every ten were country dwellers. The figures also illustrate the shifting of the population from the country to the large centers.

Twenty years ago there were 260,000 children in the rural schools and the latest figures show only 241,750, while the city and town schools have increased their total from 185,000 to 360,000 during the same period.

Hungarian Partridge in Manitoba
Manitoba's Hungarian partridge, released last spring in the vicinity of Warren, Man., have scattered over a radius of from 15 to 20 miles. About 120 birds were originally released and they have multiplied rapidly and taken to their Manitoba haunts. As yet they are immune from hunters. Another "importation" will be made from Alberta this fall.

Calf Found Bees Indispensable
A calf belonging to the prominent, well-known, New York, said the pecan for its fatal antipathy to bees. The calf was the best of his kind, frequently has bawled the bees out. One day it kicked over a hive and began to eat the bees. Its tongue and throat became so swollen that it could not be fed. It died from asphyxiation.

Unprofitable Poultry
Birds Estimate As Layers Should Be Killed From Flock

Experts estimate that nearly half the hens kept by farmers in Saskatchewan are unprofitable and should be culled without making any return in eggs.

To remedy this situation the extension department of the University of Saskatchewan is willing to send experts to any district in the province to cull the star breeders from registered flocks.

A special culling service has just been started among commercial flocks at North Battleford with the co-operation of the market branch of the Provincial Department of Agriculture, the University of Saskatchewan and the North Battleford Agricultural Society.

Out of 4,300 birds handled 2,300 were culled as unprofitable. In other words, the experts in this instance found that 54 per cent of the birds were useless as egg layers.

British Grain Men Interested In West

Representatives from Old Country Establishments Impressed With Opportunities Here

J. G. Alexander, of the Scottish Co-operative Company, and a representative of the English Wholesale Co-operative Association, are in the West on a recent time investigating grain business conditions with a view to expanding their operations in the territory and the establishment of terminal elevators.

Messrs. Robinson and Stevenson, of Scotland, England, who are interested in the flour milling industry, have been investigating conditions in Western Canada. They expressed themselves as entirely satisfied, and stated they would return next year with four mill-machinery and will open a branch in Western Canada.

Reforestation Scheme

Ontario Planting Pine Seeds on Burnt-Over Lands

A new scheme for the culture and reforestation in Ontario is to be undertaken by the Department of Lands and Forests during the coming month. The department will plant burnt-over and cut timber lands with pine seed, but as this is more or less in the nature of an experiment, only three hundred acres of land will be planted. Approximately 20,000 pounds of seed and white pine seed will be used for the production of seedlings for reforestation purposes.

Importance of Printing Industry

As a result of the survey conducted by the newly-formed Graphic Arts Association, printing and allied trades are now shown to constitute the second largest industry in Winnipeg, representing an investment of \$10,000,000, and providing employment for 12,000 people. The report shows that during 1923 the total of \$5,619,322 was paid in salaries.

World's Highest Radio Phone Station
The highest radio telephone station in the world has been built on the observatory on Fire de Mill, some 10,000 feet in altitude. The station uses a 500 metre wave length and has an antenna capacity of 300 watts. The station will render immediate service to agriculture by broadcasting weather forecasts.

A motor car has been invented that can move sideways across the road. The inventor said that pedestrians were getting altogether too strait.

Natural Resources Bulletin

Many Accidents Caused Through Carelessness With Explosives

The Natural Resources Intelligence Service of the Department of the Interior at Ottawa says.

In a review of the annual report of the explosive division of the department of mines, one cannot but be struck by the number of accidents caused by boys through the finding of explosives. This has been especially true of dynamite. One large portion of the accidents being caused through curiosity as to what the effect would be when fired by contact with fire or from the force of a blow. The effect in almost all cases was the loss of portions of the hand or more serious injuries.

Detonators, or caps are necessary when using dynamite, and gunpowder explosives. Decomposition must be started by the application of sudden high temperature and pressure. This is effected by friction, contact, or the fulminate of mercury which explodes with great violence and sets off the explosive with a time interval in contact.

The fulminate of mercury is compressed in small copper tubes which are fired by a fuse. The explosive division suggests that detonators should not be conveyed or kept with dynamite or other explosives on the same cart or in the same container.

The point of this appeal is that greater care should be taken in the care of explosives, that detonators should be kept away from children, who are naturally curious; that the danger should be explained, and the need for care increased upon the workmen who are entrusted with the use of explosives, and that both care and explosives, and that detonators should be kept away from children.

The 61 persons injured last year through playing with detonators and explosives, more than forty were boys. These latter will, as the result of carelessness on the part of the care of explosives, be handed over to the care of the police. The greatest of all the natural resources of Canada is her children; let us therefore exercise great discretion in the care and use of explosives that they may be protected from accidents by this cause.

Set Commercial Grades Of Wheat

Wheat Graders For Year Are Fixed At Four, Five And Six

The Western Grain Standards Board, at their annual meeting in Winnipeg, set the commercial grades of wheat as numbers four, five and six, which will be the basis upon which this year's crop will be graded. The board is of the opinion that the standard of these grades as compared with last year. Very careful consideration was given to the matter, but it was decided to be as lenient as possible in favor of western producers without damaging the reputation of Canadian wheat in the opinion of grain men, as the spreads may widen sufficiently to wipe out any advantage that may be secured in the lowering of the grades.

The grade number two feed was eliminated entirely.

Peace River Fruit

Many Varieties of Fruit Produced in Northwest This Year

The first fruits to be garnered in the Peace River country were plucked from a three-year-old tree at the Beaver Lodge Experimental Farm, of good size and color, and most delightful flavor. The tree was secured in North Dakota and clearly demonstrates that the Peace River country is capable of producing hundreds of varieties of fruits that were believed to be the province of the impossible of a variety. Hand cherries, apples and numerous other trees have come into bearing this year. So prolific has the growth of red currants been this year that the Canadian record was equalled for production per bush.

Stunt Actor Drowned

William Hartung, 35, movie stunt man, was drowned in the Colorado River at Yuma, Arizona, during the filming of a "western" picture. He was swept down stream when flood waters were released by the opening of the La Grange dam, carrying out the realism of the production.

Canada's Wool Clip

Production This Year Will Total Thirteen Million Pounds

Western Canada's wool clip this year is the total 13,000,000 pounds, a value to sheepmen of \$4,000,000, according to a bulletin issued by the Dominion Department of Agriculture. The quality of the product is said to be higher than last year. Approximately half of the wool clip will remain in the country to be used for the manufacture of goods for export to the United States and Great Britain.

Perfume must be drawn from the bloom on the day that it is plucked, in twenty-four hours the delicate aroma is almost gone. Many flowers are required to produce small amounts of the perfume. It takes about two tons of violet blossoms, for instance, to make about two pounds of essence of violets.

Amateur Heat New Zealand

Two amateur wireless experimenters near London succeeded in establishing communication with the New Zealand Admiralty. They exchanged congratulations by Morse signals, and two tons of violet blossoms, for instance, to make about two pounds of essence of violets.

The Muzzle: "What do you mean by kissing our parliament the first day she's here?"

Officers from as far west as Vancouver attended the annual reunion of the officers of the Canadian Machine Gun Corps in Toronto recently.

A large houseful of people in Boston refused to let advertising department refrain from using meaningless advertisements and phrases and truthful or exaggerated statements.

Large Amount Of Foodstuffs Required Each Year In Supplying Canada's Table

Three meals per day for the 3,775,552 people in Canada in 1921 would need 26,337,660 meals daily, or 9,609,456,052 meals annually.

What a quantity of foodstuffs is required to supply these meals, and what a variety must be provided. Where it all comes from, and the interests represented in its collection and distribution, would make a most interesting story, says the Federal Resources Intelligence Service of the Department of the Interior. The object of this article, however, is to draw attention to the effect of the development of our natural resources upon the provision of our food supply—the means whereby it reaches our tables, and what natural resources enter into its preparation.

Canada's chief food supply, of course, comes from the farm, consequently it is upon the development of Canada's great natural resources—the land—that our people depend for sustenance. Agriculture supplies us with not only our bread and butter, but our meat and vegetables, our dairy and poultry supplies and our fruits.

Of the total wheat crop of 399,746,000 bushels in 1923, 170,140,000 bushels was consumed in Canada. How much of this was converted into flour and how much into other products, we do not know, but in 1922 there was 1,512,619 bushels of wheat, from which was produced 1,783,131 barrels of flour. Of this flour 1,643,078 barrels was consumed in Canada, slightly less than one barrel for each person.

Of the 41,232,000 bushels of oats grown in 1923, there was consumed in Canada 467,573,000 bushels. The quantity of oats used for human food was 1,512,617 bushels which was converted into 15,512,511 pounds of rolled oats or oatmeal, of which 109,230,015 pounds was used in Canada.

Cornmeal, also, was used to the extent of 51,502,002 pounds, while 2,591,310 pounds of rye flour, 5,521,225 pounds of buckwheat flour, 4,914,063 pounds of barley and 9,432,000 pounds of potatoes, contributed to Canada's food supply.

Of the 104,573,000 bushels of farm and ranch animals produced 1,591,422 pounds of meat, together with 250,597,322 pounds of butter, 11,273,216 pounds of cheese and enormous quantities of milk and cream.

How dependent Canada is upon natural conditions, as they pertain to precipitation and temperature, is evidenced in the wheat crops of 1921 and 1922. The increase in production in the latter year, notwithstanding that there was less acreage sown to wheat, averaged five bushels per acre, or a total of 104,573,000 bushels—the difference being more than enough to provide all of Canada's requirements for flour.

While Canadians are not great fish consumers, nevertheless very large quantities are required for maintaining our tables. Salmon, lobsters, herring, cod, halibut and many other varieties are available, and of recent years a number of varieties of shellfish have been secured as edible are being made use of.

Table and dairy salt produced in Canada in 1922 amounted to 412,000 tons and common salt to 35,753 tons. Minerals also enter into the production of our food in the form of table salt, culinary salt, soda, etc., while to a large extent coal, oil, natural and artificial gas, and other mineral products supply the necessary fuel.

Flour For The Orient

Japanese and Chinese Are Now Demanding Wheat Bread

With the Japanese and Chinese becoming keener than ever on wheat bread in place of the one-time staple of rice, the Government of London, England, expects to establish a large trade with the Orient, according to a director of the company in charge of the trade.

It was explained that the grain would be shipped from the Calgary mill which should be in operation by next spring, while the elevator at Vancouver will be used for storage of grain for shipment to Great Britain via the Panama Canal as well as for shipment to the Orient.

Hold German General For Theft

Believed to be the first arrest on French soil of the thousands of German officers, commanders, by default, for offences during the German occupation, General Von Maltzahn, charged with stealing furniture during the occupation, was apprehended at Puteaux. He was visiting the grave of a relative.

Canada's Oyster Industry

Output in Recent Years Has Been On the Decline

Oysters have been known and used as food from the periods of Greece and Rome. In many countries they are now, where it all comes from, and the interests represented in its collection and distribution, would make a most interesting story, says the Federal Resources Intelligence Service of the Department of the Interior. The object of this article, however, is to draw attention to the effect of the development of our natural resources upon the provision of our food supply—the means whereby it reaches our tables, and what natural resources enter into its preparation.

Canada's chief food supply, of course, comes from the farm, consequently it is upon the development of Canada's great natural resources—the land—that our people depend for sustenance. Agriculture supplies us with not only our bread and butter, but our meat and vegetables, our dairy and poultry supplies and our fruits.

COMMUNICATION

While we invite contributions to the above heading, we do not hold ourselves responsible for all the views which may be expressed in them. These writing articles of this kind must sign their own names, not necessarily for publication, but rather as a mark of good faith. That which the article will not be printed.—Ed.

The editorial in the Review of Nov. 20, under the heading "That Parliament be Suppressed" is timely. It is a question which every citizen must seriously ponder, because economic and political developments have now reached such a stage within the present order of things that the people's rights of democratic self-government are practically impossible. Through the evolution of industrial enterprise and the concentration of wealth, a few unscrupulous individuals have succeeded in gaining control of the natural resources and public utilities to such extent that they now completely govern the destiny of the people, including parliament.

During the last session of the federal house, Mr. Woodworth of Winnipeg, offered an amendment to the government's fiscal policy. It was at that time that the Speaker of the house pointed out that the amendment was too specific, and for that reason had to be referred back. It could be allowed consideration by the house. And Mr. McPherson on this occasion took the liberty to explain to the house that it was contrary to past practice of parliament to permit a private member to propose changes of fiscal policy—such could only be submitted by the cabinet members. When, together with this we consider that institutions such as the "Senate" and the "board of railway commissioners" the members of which are appointed by the government. Yet hold powers to veto or deliberately to saddle any bill or measure the parliament enacts which they do not approve, these facts confirm positive proof that some concealed power is hard at work undermining the principle of "the rights of the people." It is also obvious that this tendency will develop from bad to worse if the people do not begin to derive ways and means to protect themselves.

In this connection it may be advisable to critically examine what in reality constitutes "political power." The people have been taught and the vast majority still believe that political power is based on the will of the majority as expressed at the election. This is a false conception, because upon closer analysis it will be found that an "inner circle" composed of men that have much at stake, select the candidates and pay campaign expenses. All the people are asked to do is to vote. The consequence are that whichever of the candidates thus selected wins, the people lose, because they have been selected on the strength and ability that they possess to protect and promote the interest of corporate wealth. Therefore the true basis of political power is wealth and is dependent on control of the means and materials of wealth-production and distribution.

It is this fundamental fact that the "progressive party" have not yet fully realized. Even in Alberta where the farmers political activity is supposed to be based on "industrial group principles" the necessary understanding has not yet been developed. Yes, strange though it may seem, it is the economic principle of unity and solidarity that is a constant target of attack from the old political parties and their supporters. The fact is, that those forces do fully understand the advantage of such political policy, while the farmers and laborers do not yet fully recognize its importance.

We can all recall the optimistic speeches delivered by progressive members concerning the advantages of securing the ratification of "Crow's First Pass agreement" and the great financial saving as a result thereof, only to find it to be largely illusory. This great shock and loss of political prestige is the result of lack of proper knowledge of the political game. Although often told that we must construct our political machine from the ground up, we have, as farmers, sheepishly failed to do so. The same is true of labor, and the small business men. The result of this serious neglect is that our representatives have not the necessary organized force behind them to enforce their demands.

I therefore trust that this incident will become a valuable object lesson to every citizen who believes in the principles of "human rights" and hence forth get busy to organize for the next political battle. First organize in the industries in which we are engaged, co-ordinate your efforts; learn to co-operate socially, industrially and politically. Such we had would enable us as citizens to develop a force for progress and improvement that the government would dare to ignore or tamper with. This power, their reader, lies in your hands, use it intelligently and we shall never again be defeated in our efforts. Produce results, not only financially and politically and thereby make possible a better and brighter future.

THE REDCLIFF REVIEW

Hunting With Guns as Accessories

By the time he has gathered all his equipment and (judiciously) around him the averages man preparing to enter the woods with the idea of game hunting begins to wonder, first of all how he is going to carry it all, and then just how much of it he really needs. Eventually he sets off with the bare necessities. He takes most of the paraphernalia he intends to take, but one thing he will not leave behind—his camera. It may get in his way sometimes, but as a rule he finds it indispensable. Without it he knows that he will be unable, probably, to support his claims as to big game shot or ferocious game encountered.

As a matter of fact quite a noticeable number of those entering the Canadian woods during the last few years have been known to carry guns rather than cameras as accessories. A great deal more skill and bush lore is required to enable one to secure a shot with a camera than with a rifle, the chase is more exciting and the end, without entailing any slaughter, produces quite as much thrill. This will be readily acknowledged by the true sportsman. The most interesting shots are some the closing season's was not the largest animal seen, but the under the leg teeth was caught in the Kipsaw district of Ontario, while the other faced the camera in the valley of the Tobique, near Roblin. The buck, taken in the way of "action" photos...
